Allowance of Application # 09/772,546

1. The following communication is in response to applicant's RCE/Amendment received 16-September-2005. The receipt of formal drawings on 16-September-2005 is acknowledged by the examiner.

Reasons for Allowance

2. The following is an Examiner's Statement of Reasons for the indication of allowable subject matter. The instant application is directed to a non-obvious improvement over the invention described in U.S. Patent No. 6,480,118 to Rao, the improvement comprising a method for characterizing a drilling event in a proposed wellbore, wherein a well plan is determined which includes at least a wellbore trajectory; whereby an estimation of the likelihood of an occurrence of, a position along the trajectory, and a severity of consequences of at least one drilling event is determined and displayed. This patentable distinction is included in each of the independent claims, nos. 1, 13, and 23.

The examiner understands the reasoning behind applicant's amendment changing the term "hazard" in the claims to "event". While the Rao patent utilizes the same "hazard" terminology to describe its invention, there is no dispute in the examiner's opinion that Rao is directed at using acoustical systems to look ahead of the drill bit in the current wellbore to identify geological or environmental features which could be detrimental to the drilling performance. In contrast, the present invention characterizes a drilling event in a proposed wellbore, while estimating a likelihood of undesirable occurrences [see the specification, pages 2 and 8], a position along the trajectory, and a severity of consequences of the drilling event. In light of this

In re Application of: Aldred et al.

reasoning, the examiner agrees with the proposition that the present invention characterizes an occurrence or drilling event that is desired to be avoided and/or mitigated, and does not address identification of a geological or environmental feature in a current wellbore as taught by Rao.

The art of record, either individually or in combination, fails to teach, suggest, or render obvious the useful, concrete and tangible <characterizing of a drilling event in a proposed wellbore> having the corresponding structure which is disclosed in the specification and equivalents thereof at least at page 7, line 14 through page 26, line 16, and Figures 1-8. In view of the foregoing, the claims of the present application are found to be patentable over the prior art.

Response Guidelines

3. Any comments considered necessary by applicant **MUST** be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue Fee. Such submissions should clearly be labeled "Comments on Statement of Reasons for Allowance".

3.1 Any response to the Examiner in regard to this allowance should be
